

Sustainability of Constructions

Integrated Approach to
Life-time Structural Engineering

Proceedings of Seminar

Dresden 6, 7 October 2008

Contents

Foreword	v
<i>L. Bragança, H. Koukkari, R. Blok, H. Gervásio, M. Veljkovic, Z. Plewako, R. Landolfo, V. Ungureanu, L.S. Silva, P. Haller</i>	
Chapter 1. Sustainability and life-time structural engineering	
Integration - the key and the way to life-time structural engineering <i>H. Koukkari & L. Braganca</i>	1.1
From Theory to Practice - From Practice to Theory - Two sides of the Same Coin <i>A.N. Tombazis</i>	1.11
Urban Habitat Constructions under Catastrophic Events <i>F.M. Mazzolani</i>	1.19
LCA - Comparison of building structures in different materials <i>W. Winter</i>	1.29
Sustainable construction products for energy-active façades <i>B. Weller, C. Hemmerle & S. Jakubetz</i>	1.38
How to value the sustainability - Differentiating, adjusting and extending traditional paradigms <i>E. Günther</i>	1.46
The “German Sustainable Building Certification” system for Sustainable Design <i>W. Sobek, H. Schuster & H. Trumpf</i>	1.53
Educational material on sustainable constructions <i>H. Koukkari, M. Veljkovic & L. Bragança</i>	1.59
Chapter 2. Criteria for Sustainable Construction	
Introduction to Criteria for Sustainable Construction <i>R. Blok & H. Gervásio</i>	2.1
Global Methodology for Sustainability Assessment: Integration of Environmental LCA in Rating Systems <i>L. Bragança & R. Mateus</i>	2.3
Multicriteria and multi-actors interactive tools aiding to sketch the project choices during the first stages of design, with objective of best environmental performances, for new or existing buildings <i>J.-M. Hauglustaine, M. Descamps, S. Azar, C. Baltus</i>	2.15
Optimising structural grids of Multi-Functional buildings <i>R. Blok, H.G.E. Daamen, S. de Kok</i>	2.33
